

Regression Testing Checklist

Version: 1.0

Date: 2025-12-2

Tester: Ningsong Jia

1. Core Functionality (HTMX Mode)

Verify that fixing No-JS support didn't break the standard AJAX experience.

- ☒ **Add Task:** Adding a task still works inline (no page reload).
- ☒ **Edit Task:** Clicking "Edit" still swaps the form inline.
- ☒ **Cancel Edit:** Clicking "Cancel" still reverts the row inline (HTMX works).
- ☒ **Delete Task:** Clicking "Delete" still shows the browser confirmation dialog (`hx-confirm`).
- ☒ **Search:** Typing in the filter still updates results live.

2. No-JS Fallback (The Fixes)

Verify that the new fixes are actually working.

- ☒ **Add Task:** Submitting form works via full page reload.
- ☒ **Edit Task:** Clicking "Edit" loads a separate edit page/view.
- ☒ **Cancel Edit (Fix #2):** Clicking "Cancel" correctly navigates back to list view (via `formaction`).
- ☒ **Delete Task (Fix #1):** Clicking "Delete" navigates to the **Confirmation Page** (interceptor).

3. Accessibility Regression

Verify no new barriers were introduced.

- ☒ **Keyboard:** Can Tab to "Cancel" button and activate it with Enter.
- ☒ **Focus:** Focus is managed reasonably after adding a task.

☑ **Contrast:** The new "Delete" link style meets contrast ratios.

Result: PASS. The system is stable in both modes.
